

# VMware vSphere Optimisation Assessment

ultima

The VOA (vSphere Optimisation Assessment) is a 30-day trial that allows you to evaluate VMware® vSphere™ with Operations Management™ or VMware® vRealize™ Operations Management Suite™.

We will install the software, monitor and collect data for a few weeks, at no cost to you. The findings and recommendations are compiled into a personalised master assessment report and presented back to you, explaining the results.

## Virtualisation has evolved: solve your productivity problems

Let us show you how to increase your IT efficiency with the free vSphere Optimisation Assessment. It's time to explore the next evolution of virtualisation. With our expert help, you can:

- Cut time to problem resolution by 26%
- Identify over-provisioned virtual machines and cut IT admin costs
- Save up to 30% on hardware by increasing capacity utilisation
- Easily predict and respond to future business needs

## ➤ Get your **FREE** customised optimisation assessment report

At the end of the trial, we will present you with your customised VOA report. This detailed report will illustrate how you can improve your virtual environment's efficiency, manage risk and improve its overall health.

This visibility will allow you to proactively ensure service levels are met, optimise resource usage and manage your dynamic virtual and cloud environments. Instead of reacting to problems, you can solve them before they happen.

## Why have operations management?

The challenge with any data centre is maintaining the resources in the most optimal configuration. With VMware vRealize Operations Manager the guesswork is replaced with calculated analytics, providing administrators complete insight into possible bottlenecks and oversized or undersized systems.

vRealize Operations Manager can then be integrated with:

- vCenter Configuration Manager to provide standards and compliance
- IT Business Manager to provide cost metering and reporting services
- vCloud Suite to provide service levels and automation
- vCenter Infrastructure Navigator to provide application dependency mapping and extended root cause analysis

### ➤ Ultima Offer

To enable the benefits of using vRealize Operations Manager, we will install and configure the evaluation appliance into your infrastructure.

This process will provide you with the fully functional vRealize Operations Manager for a 30-day period, after that time we will return with a review of its analytics and provide recommendations. This is a 2-day engagement (installation and analysis), after which you can choose to keep the appliance by simply purchasing a license.

Additionally, you can opt for a full vSphere health check and vSphere optimisation assessment. This will allow health statistics to combine with deep performance information to offer both best practice configuration and optimisation of your vSphere environment.

ultima

## Features and Benefits

**97** Health  
Immediate issues

### ➤ Health and Workload

Identify anomalies, faults and stressed workloads that can impact performance and health.

**93** Efficiency  
Optimization opportunities

### ➤ Proactive Smart Alerting

Automated root cause analysis provides advance notification before end users are impacted.

**3** Risk  
Future issues

### ➤ Auto Correlate Change Events

Trace degradation for better configuration management.

**17** Reclaimable Waste  
Shows the percentage of total capacity that can be reclaimed

### ➤ Capacity Trending and Analysis

Performance trends, forward-looking projections and extended forecasts provide insight into current and future resource requirements.
