

# Managed Endpoint Detection & Response (EDR)

As key vulnerable points of entry to your organisation's network, endpoints represent a significant security risk. But with traditional endpoint technologies ineffective at detecting the latest advanced threats, identifying and responding to endpoint-focused attacks has never been more challenging.

**£7MIL**

Average cost per breach from an attack on endpoints

**68%**

Of organisations experienced a successful endpoint attack over the past 12 months

**280 DAYS**

Time taken to find and contain the average cyberattack

Endpoint Detection & Response technologies enhance threat visibility and coverage beyond traditional antivirus and network monitoring tools. On each host on which a sensor is installed, an EDR tool captures important system events such as registry and file changes and uses real-time behavioural monitoring to pinpoint suspicious activity.

However, even though early detection of attacks targeting endpoints is vital, without a team of security experts to leverage the power of the latest EDR technology and proactively hunt for threats 24/7, your organisation is unlikely to achieve the improvements in threat detection it seeks. Ultima's Managed Endpoint Detection & Response Service overcomes these challenges, supplying the latest technology, an around-the-clock team of security operations centre experts and up-to-the-minute threat intelligence for a cost-effective monthly subscription.

## Key Benefits

### Enhancing threat coverage & visibility

Using the latest endpoint telemetry to enhance visibility and coverage of memory-resident malware, policy violations, command and control (C2) activity and other advanced attack techniques.

### Accelerating response to attacks

Security experts provide actionable mitigation guidance to respond to incidents and can leverage automated incident response playbooks to contain and disrupt attacks before they can escalate.

### Supports proactive threat hunting

Our experts use their knowledge of the latest tactics and techniques used by cybercriminals to create custom watchlists that help identify emerging threats that traditional endpoint solutions miss.

### Eases the strain on in-house teams

By analysing, triaging and prioritising EDR alerts and only communicating those which genuinely require attention, your in-house security team can focus on incident response and other aspects of security management.

➤ Contact us today to discuss how we can ensure your endpoints are secured round the clock, keeping your business, its revenue, and reputation safe- 24x7x365.
