

Audit Services

ultima

Through our partnership with N2S, we can provide a clear insight into every aspect of your IT estate, including voice and data networks, desktops, infrastructure management and data centres.

Offering both a full and mini version, N2S have a vast knowledge of even the most complex audits, including both government and military establishments, where the deployment of Security Cleared staff (SC and above) is a compliance requirement.

Why do I need an audit?

It is required by law for companies to safeguard assets and data. In compliance with the General Data Protection Regulation (GDPR), the Data Protection Officer within an organisation needs to know the location of all data bearing devices.

It's important to note that Software Asset Management (SAM) tools do not capture everything. For example, if devices are not switched on or connected they won't be visible. This is hidden ROI that, unless a physical audit is completed, you will not know about.

Guaranteeing an accurate and efficient service, a 4-man team and manager can complete 1,000 devices in a day. In addition, the use of barcodes means subsequent audits are even quicker as goods can be scanned in.

Audit reports provide the following invaluable information:

- Accurate record of data bearing devices
- Site address and device breakdown
- Device count and type (manufacturer, function)
- Value of equipment for reuse, remarket or recycling
- Recommendations

n2s

The Benefits

The information gathered provides a number of business benefits, including:

- **Cost Control**
Help with budgeting and timely replacement of computer equipment.
- **Security**
Strengthen your organisation's approach to risk.
- **Asset Tracking**
Maintain accurate records of all equipment.
- **Compliance**
It is required by law for companies to safeguard assets and data.

Full vs Mini

Full Audit

A complete 360 view of your resources; includes audit team on site, accurate logging of all equipment and white labelling of service as required.

Mini Audit

This service is especially useful for businesses looking to exit specific locations, or those looking to move IT resources into the cloud / hosted providers. It typically requires one day onsite with a report delivered back within 48 hours.

Areas of Strength

- Speed – Over 1,000 devices per day
- Level of Expertise – Track record of working with customers of varying size and value
- Accuracy
- Repeatable
