Wide Area Networks

ultima

A Wide Area Network (WAN) connects multiple sites to create an organisation's own virtual secure private network. Its performance is critical to ensure your business runs smoothly, people stay productive and data is secure. You can't afford lengthy periods of downtime, outages or poor connectivity. Security, resilience, capacity, speed and reliability are all essential to enable multiple network services to operate simultaneously - while balancing this with value for money.

Ultima, powered by Convergence Group, can supply a WAN solution that ensures your network is always operating at optimum performance, every minute of every day.

Why choose us?

We deliver WAN differently. Through our partnership with Convergence Group, a leading aggregator and primary partner to each of the major networks, we receive a preferential service and better responsiveness from tier 1 suppliers. This also means we can mix and match seamlessly between carriers to get the best combination of price, connectivity, capacity and speed.

By first understanding your situation, drivers and future plans, we'll devise a WAN solution that is perfectly suited to your short and longer-term needs. We then manage the whole service for you - proactively monitoring the network every day to make sure it's always operating at optimum performance and delivering maximum value for money.

- High performance network
- Leading carriers
- Dedicated and personalised service

WAN Solutions

❯ **Point-to-point** connecting two sites

❯ **A hub-and-spoke model** with branch sites communicating only with the central hub

❯ **Any-to-any** where every site is connected to every other site

❯ **A combination** with different sites connected in different configurations

❯ **Software Defined WAN (SD-WAN)** - competitively-priced secure network connectivity

❯ **Multi Protocol Label Switching (MPLS)** - routing data through the best path

❯ **Firewalls** - managed firewall and web filtering services for extra security

Key Benefits

❯ **Flexible WAN options**
Powered by Convergence Group, we provide a set of comprehensive and flexible WAN services, from private WAN and MPLS to SD-WAN.

❯ **Greater network capacity**
Aggregating the fibre services of all tier 1 carriers allows us to deliver better circuit volumes and greater network capacity.

❯ **Wider coverage**
No single carrier offers 100% geographic coverage. By working with all the top networks, we use the best from each to ensure great connectivity wherever you are.

❯ **Competitive pricing**
Like an insurance broker who knows the market, we work closely with network providers and leverage our position to secure the best deal for your business.

❯ **Better support**
We pride ourselves on offering a superior service. Just ask us once, and we'll get the job done for you.
